FITTING ROOM

What Makes
Life Better?

A simple question with the power
to change everything.

XFrame worked with Uniqlo to deliver demountable fitting rooms across multiple Australian sites. The fitting rooms allowed Uniqlo to meet 'surge capacity' requirements across peak-seasons, and re-allocate capacity as required. Spaces were installed after-hours to minimise disruption to store operations and designed to integrate into the sites existing aesthetic.

- ✗ Under the direction of Uniqlo's in-house design team, XFrame engineered, manufactured, supplied and installed demountable fitting rooms.
- ✗ Our pre-assembled light-weight panels and efficient tartan planning grid allowed rapid installation of these spaces throughout multiple unique sites. Expansion modules made it possible to join fitting rooms together - decreasing time spent on site and overall costs.
- ✗ Our braced and standardised panels also meant that it was possible to install nib wall sections - creating privacy and a feeling of permanence - without the need for any permanent construction.
- ✗ All panels (wall frames and linings) arrive to sites preassembled and pre-sized - removing the need for any messy/noisy on-site cutting.
- ✗ Prefabricated durable finishes - pre-cut off site - that included recessed mirrors were hung on flush-mounted XFrame 010 clips. These linings have no visible fixing hardware and can be removed when spaces need to be reconfigured.
- ✗ Integrated lateral adjustment in the lining mounting system allowed seams to be neatly adjusted to cater for onsite variances and close up gaps between panels.
- ✗ Wall heights, using the same standard kit of parts, were adapted between sites to meet fire regulations. Custom width panels were also adopted to ensure efficient use of space in smaller stores, and meet accessibility requirements.

Installation of Uniqlo Midland fitting rooms.

Specifications

- ✗ Average install timer per fitting room of <1hr.
- ✗ Manufactured and installed in 2-3 weeks.
- ✗ Installed via a National FF&E partner.
- ✗ Supplied with engineering certification for free-standing spaces.
- ✗ Supplied with hollow core 850mm wide doors / jambs.
- ✗ Integrated 12mm negative / shadow detail to floor.
- ✗ 2100mm and 2400mm wall heights on a 92mm frame width.

Finished XFrame x Uniqlo Emporium fitting rooms.
